It was my mission to understand the patent.

I get a bit obsessive with understanding the mechanisms of how something works.

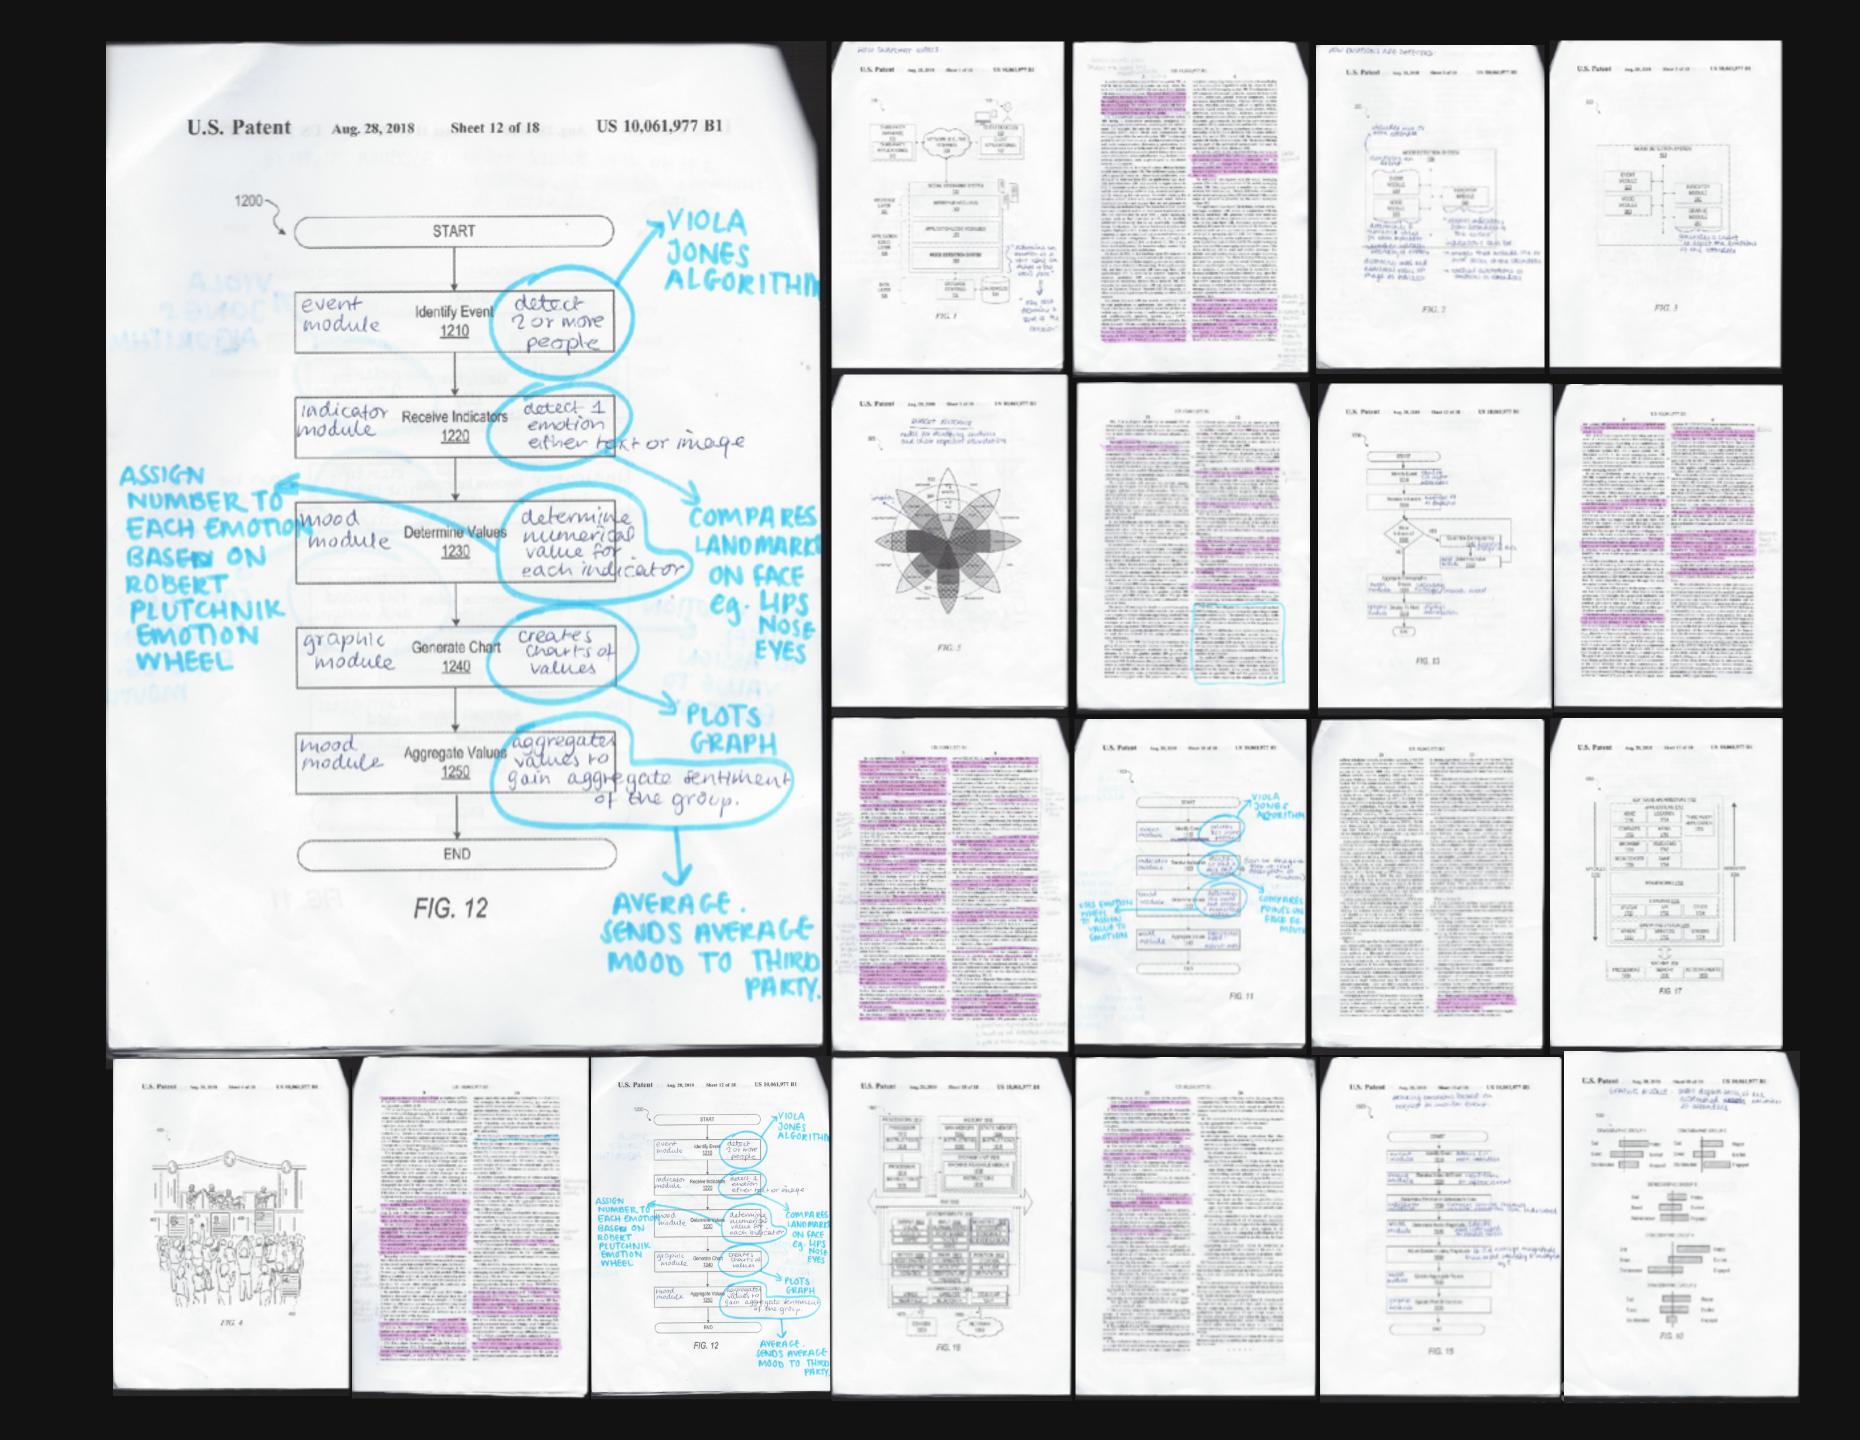

My method begins with trying to understand what every word means.

e.g. *receive indicators* just means detecting an emotion in an image or video.

The 5 steps on the right are basically what the whole patent is about.

I began to question why all these pages were necessary when a lot of the content is repeated.

How can I summarise this and make it accessible to a wider audience?

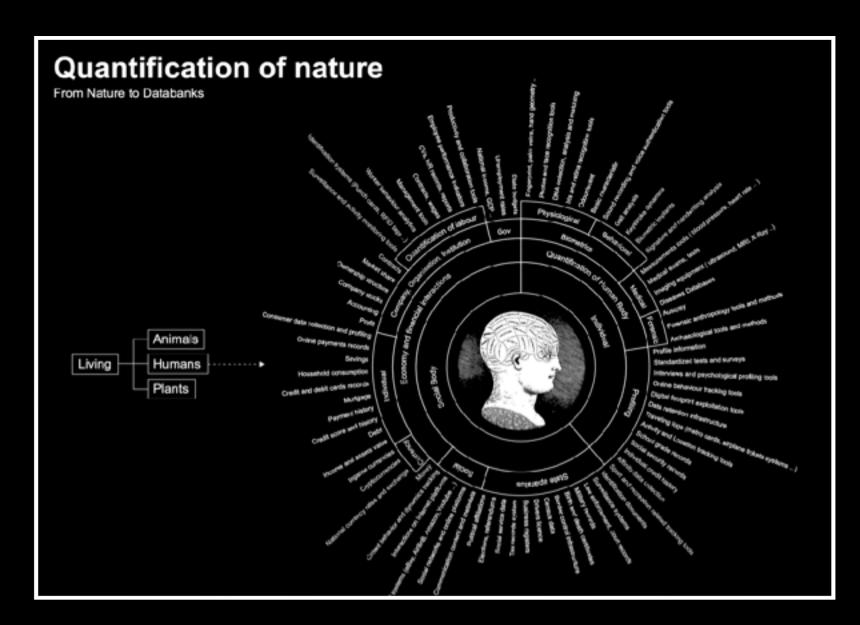

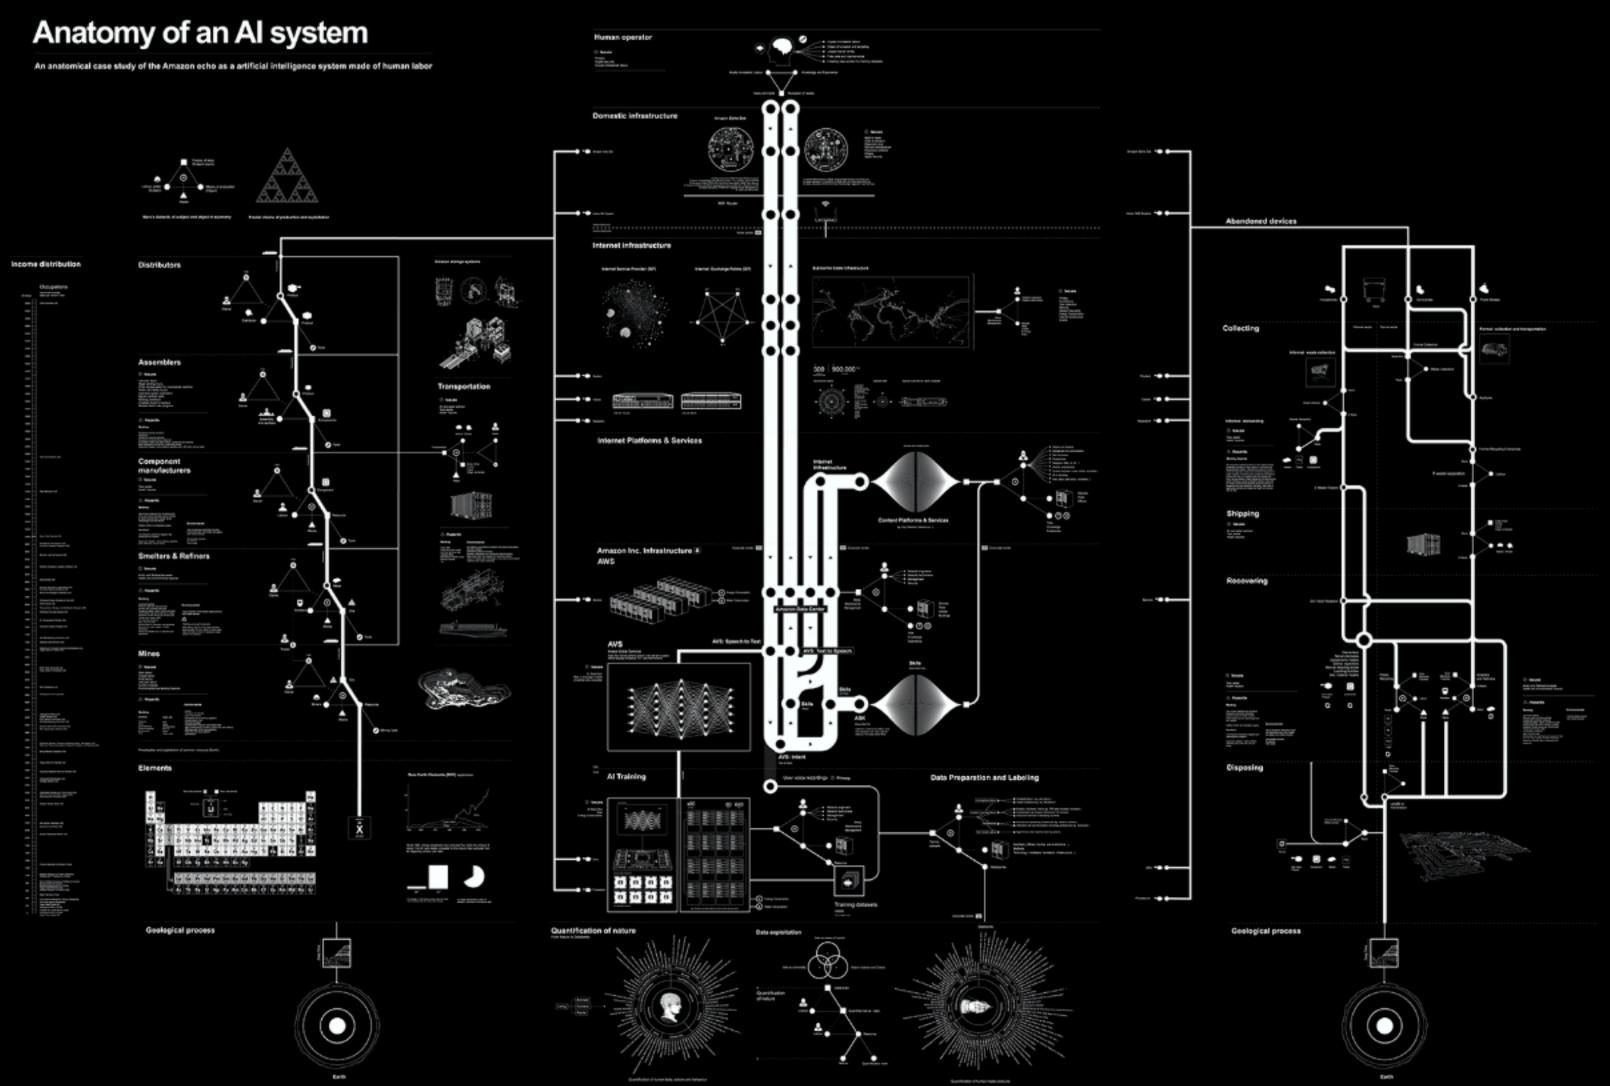

How AI and its complexities have been visualised?

Anatomy of an Al system is a map and essay which picks apart an Amazon Echo.

The research is incredibly detailed and attempts to build a visual landscape of the scale of one device. It embodies the complexity of Al

It's important to think of technologies as irreducible to what we think of them. This is something I touched on in my dissertation. Our devices are a culmination of geological and biological processes.
